# CHILD & ADULT COTS

*Cots that offer Practical and Safe Solutions*

All cots require a thorough assessment procedure. We offer a free of charge demonstration and assessment service to help ensure that the correct equipment is prescribed.

## TIMMY ▶

The Timmy is a flexible care cot, suited to hoisting. Two heights of side are available and all 4 sides lower allowing full access. This can also be specified electrically operated. Available in different platform sizes and door heights with or without etched, coloured panels and with a number of profiling and height adjustable platforms.

## ◀ CARSTEN

The budget option. Solidly made, like all of these cots from Beech wood and finished with vegetable based coatings, the Carsten is a therapy friendly cot, suited to hoisting with either one or two drop down sides.

This cot maybe specified with a number height adjustable platforms.

## OLAF ▶

The Olaf's features are really helpful to both carer and user. The platform goes very low (35cm to the top of a basic mattress), but also rises to working height (105cm) to allow the carer comfortable access to the user. The lowest available height can be 17cm! Superbly crafted and strong with a light airy feel because of the use of the plexiglass, together with the wooden rails. Variable height is standard on this cot and it is available in several door heights and platform sizes and a number of padding options. The Olaf, because of its ability to go so low, it is extremely useful in assisting a disabled parent.

## ◀ HANNAH

The Hannah is available with several door heights and platform sizes.

This is an extremely versatile and user friendly cot. It may be specified with either coloured or plain rails, and plexiglass may be specified as an alternative to the wooden rails.

The Hannah can be used with any of the sleeping platforms and is the best option where padding is required.

## EMMA ▶

The Emma is available with either 4 or 8 opening doors. This cot provides a low entry point with a 50cm variable height adjustment as standard, and when raised, the entire cot lifts to maintain a full 70cm cot side at all heights. Padding may be fitted in a range of colourful prints.

## ◀ PADDED

Padding a cot can have serious implications if not done correctly. The padding is used to prevent an injury and to ensure the users safety. We are able to pad the cot in specific areas or completely if required in a range of hygienic and colourful fabrics. Where full height padding is required, we can fit soft transparent windows to provide visual access for carers and users.
