

Why buy a Cot

from **Theraposture Ltd?**

- The overall value of our products and services and quality of our organisation and approach, make us a regular choice for **Occupational Therapists** nationally, and the leading supplier of cots in the UK.
- Our company has been making individualised products for **30 years**. We are in healthy order and expect to be around for many years to come.
- We provide a free of charge, no obligation **home assessment** of needs. Often this will involve a **product demonstration** so that you can be sure the correct combination of size, action and height of side can be identified, and you can actually see the product in your home. Our assessments relate to our products only.
- Our assessors are accredited **Trusted Assessors (Disabled Living Foundation: medical professional level)** and **Theraposture Ltd are members of the British Healthcare Trades Association, comply with their Code of Practice**, and have specific training and experience in working with children and vulnerable adults.
- By doing an assessment, **Theraposture Ltd** takes the **full responsibility** for the Cot meeting the needs of the user and their carers. If there are any problems with your Cot once it's delivered, it is **our responsibility** to sort them out.
- Our Cots are made from **top quality Beech** - a stable and strong renewable hardwood. The grain in this wood is very close making it structurally very strong, unlike some other coarser hardwoods (e.g. Ash). In our opinion, **softwoods are completely unsuitable for these products**, but regrettably still used by some.
- All of our cots meet the **MHRA requirements** regarding entrapment and are all **TUV and CE marked**. Our Cot doors are designed with entrapment risks in mind. They always open outwards meaning that they can be fully padded and that there is no void for the user to fall into when the doors are partially open.
- **Our guarantee is for 3 years and is without restrictions**. We know of no other warranty that is truly as fair and comprehensive. Read the small print and you will frequently find all is not what it seems elsewhere.
- Our **motors** and **hand controls** are the best: Strong and quiet and with a current reduction system to ensure user safety. Not all electronics are the same.

I hope that these points help you to make an informed decision having considered all of the facts. Our aim is to provide the best through a combination of assessment, expertise and service. Cheapest isn't always the best and in the majority of cases, you do get exactly what you pay for. We are generally competitive on price. If we appear not to be it may be a difference in specification.

Please get in touch to check and see if we can help.
