

The Thera.Care Low is available in either **200cm** or **170cm** lengths.

Fully compliant with **BS EN 1970 & BS EN 60601-2-52** with a safe working height of **83cm** (without mattress).

NEW 60 cm variable height

Lockable castors

The Thera.Care Low

offers all the function of a variable height and profiling bed, but with the added advantage of low access.

Therapists are increasingly asking us for this type of low access bed following risk assessments. It was once the policy to nurse patients on the floor where there was a risk of the user falling from the bed. This caused manual and handling issues for the carers.

The THERA.CARE LOW importantly allows the user to be raised 60cm to a safe working height when required and when the user is sleeping, they may be lowered almost to the ground.

When used in conjunction with mesh sides and padded rails it can substantially reduce the risk of injury for users with dementia.

This bed is recommended for all ages including children under 12 when used with mesh sides and padded rails. Alternatively please look at our extensive range of paediatric cots.

- Electronic four section profiling.
- Electronic variable height.
- Steel Mesh Platform.
